The origin of the Nordic tipi

The Sami are the only indigenous people in Europe. The region historically inhabited by them, Sápmi, extends over northern Scandinavia and parts of Russia. They used to live as nomadic trackers, hunters and reindeer keepers. The traditional Sami tent, the forerunner of our Nordic tipis, has been the home of the Sami since the dawn of time as they followed their herds of reindeer over the vast, northern expanses of wilderness.

The tough climate, the long winter and nature's tribulations were part of their everyday life. They followed the seasonal movements of their reindeer, accompanying them to their summer and winter grazing grounds. The focal point of their tents was the fire which gave them heat, light and a homely atmosphere.

Tentipi started in Moskosel, a tiny village in Swedish Lapland, where the Sami heritage is still present today. Our hope is that, when you choose a Tentipi Nordic tipi, you will feel the same connection to nature as the indigenous people do.

The Tentipi® story

The idea came to me when I was sitting by a stream, far out in the wilds of Swedish Lapland. I was tired and hot after a long day of exciting white water rafting and river canoeing. All I wanted to do was socialise and eat dinner with my friends around a fire. There were six of us sharing two tunnel tents, we were cooking outside and the mosquitoes were horrendous. I felt we were missing something in our environment that was preventing us from relaxing and being close to each other.

For a long time afterwards, I pondered over whether there could be a different way of living in nature. Inspired by the ancient knowledge of the indigenous Sami people, the journey towards a modern way of camping began. What happened next is 35 years of history. With life around the fire as its central theme, *Moskoselkåtan* was founded and in 2005, the name was changed to Tentipi.

As manufacturers of tents based on the type of dwelling used by the Sami, we created the international term "Nordic tipi" so that people in other parts of the world would get an idea of what our tents look like and how they function. This kind of tent is not a new phenomenon. For thousands of years, indigenous peoples all over the world have used the method of stretching animal hides over wooden poles with a warming fire in the middle. What makes us proud is that we have managed to develop this type of accommodation into a reliable, modern and smart way of camping with continual refinements and improvements. A Tentipi Nordic tipi is so much more than just a tent. It is a home in the wilderness.

Bengt Gustav

Founder

Why choose a Nordic tipi from Tentipi?

1. Easy to pitch in only a few minutes

Measure out tent pegs in a circle, attach the tent canvas and then raise the central pole. With our pitching tools, you can't go wrong.

2. You can use a fire or stove inside

Whether you prefer an open fire or a stove, our Nordic tipis' unique design enables fire-making for warmth and cosiness, and increased safety when winter camping.

3. Outstanding ventilation

Keeps you comfortable whether you camp in the Arctic or under a blazing sun in the desert. Mosquito-netted openings let you vent out hot air and smoke without getting insects in the tent.

4. Very stable in strong winds

The symmetrical shape and low centre of gravity make our Nordic tipis more secure in high and gusty winds than most other tent designs.

5. Space for socialising and plenty of headroom

Plenty of room for friends and family to socialise around the fire. You can get dressed without crawling around on the floor.

6. Modular and flexible

Accessories such as floors and inner tents are offered separately, rather than having them built into the tent, allowing you to combine products according to your needs.

Comfortable living – a home from home

A Nordic tipi from Tentipi is more than just a tent. It is a home away from home for adventures anywhere in the world – on ice-fields and glaciers, in storm-force gales or blazing heat. It's a comfortable place for socialising, cooking and spending time together after a day of adventuring. The Nordic tipi is developed for people who require maximum performance and flexibility.

A tent with an atmosphere

The Nordic tipi is more than only protection and shelter from bad weather. It is a room with an atmosphere, an experience of its own. The circular shape and the possibility to have a fire in the middle, not only provides light and heat, but also creates a natural space for conversation. It has a lot of open space and great headroom. Our patented In-Tent Vent™ system gives you full control of the outstanding ventilation from the inside of the tent. The natural colours of the Nordic tipis will fit in well in any setting.

Tent with floor or inner tent as accessory

Add accessories according to your needs. An inner tent gives an extra protection from insects, and when using a lightweight tent, from condensation. The fabrics of our cotton/polyester and eco tents have breathing properties, avoiding condensation, so a floor may be enough. When using an open fire inside the tent, choose a floor or inner tent with floor opening option. If you require more protection, for example from insects, then you will need an inner tent without the open floor option.

Durability, function and quality

We use premium materials and reinforce products where wear and strain occur. Making products that last is the best we can do for the planet.

Smarter use of space

By replacing several smaller tunnel tents with one Nordic tipi from Tentipi, you gain lower weight per person, headroom to stand up straight, fire-making possibilities and a room to socialise in.

**6 people
5.4 kg**

**3 + 3 people
8.0 kg**

Flexible Nordic tipis from size 2 to 15

Tentipi Adventure Nordic tipis are available in six models, from a snug two-man tent to the spacious Flex 15.

The numbers attached to the product names are based on how many people normally sleep in a hiking tent. The comfortable sleeping number is less.

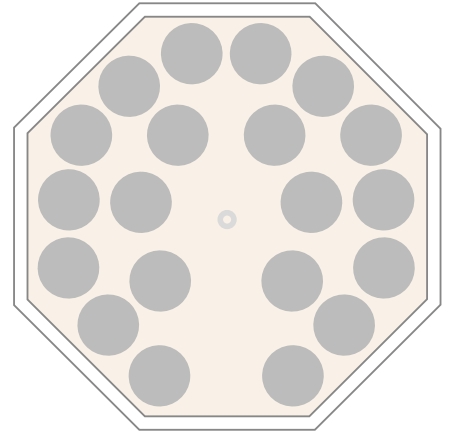

Comfortable living*

To get more space for socialising and camping equipment inside the tent, the comfortable sleeping number is less than the number in the product name.

Hiking tent sleeping**

The number in the product name is based on how many people that can sleep in the tent according to a normal hiking tent. You can fit one more than the number says.

Socialising***

In a Nordic tipi you have space for socialising and plenty of headroom. Double the number in the product name for the approximate amount that can sit down and socialise in the tent.

Outstanding fabrics

All our fabrics will keep you safe and dry in the elements and they allow the use of an open fire or stove if you follow our fire safety instructions.

Cp - cotton/polyester

If weight is not a crucial factor, our cotton/polyester fabrics offer you a classic look and a comfortable indoor climate. This kind of fabric breathes out condensation while also keeping rain out.

Eco - hemp/organic cotton/recycled polyester

A new, innovative and sustainable fabric with a unique blend of hemp, organic cotton and recycled polyester. The perfect choice if you want to lower your carbon footprint, but still take advantage of outstanding breathability.

Light - polyamide

If you are hiking and want as little packing weight as possible, choose a lightweight tent. The polyamide fabrics are waterproof and you can add an inner tent which will protect you from condensation from the tent walls.

Three quality grades

Most Tentipi products are available in three different quality grades - Pro, Comfort, Base - to suit a variety of needs. Pro has the most features and the highest quality of material. Comfort is medium grade in all aspects. Base is a high-end product, but in our world basic in features and material.

Pro

Top quality material and our most advanced features. Designed to meet the high demands for adventures in extreme conditions. Intended for frequent use.

Comfort

High-quality materials, equipped with smart features. Comfort products are designed for intermediate use, features are similar to Pro level products but with slightly less versatility.

Base

Good standard materials. Fewer features than Pro and Comfort but still a very strong product with good functionality. Basic in our world, used and trusted by professionals, nonetheless.

Six models

Safir™

Pro | Designed for the most extreme conditions. Also perfect for the active family. Safir has everything – rolled into one single tent. We claim it is the world's best Nordic tipi and most versatile tent.

Safirflex™

Pro | A spacious tent with walls that can be raised partially or all the way around for a full panoramic effect. Performance level of Safir.

Zirkon™

Comfort | By Tentipi standards, this is medium class but in other contexts, it's top class. A home away from home for people who want to invest in their outdoor living.

Zirkonflex™

Comfort | A spacious tent with walls that can be raised partially or all the way around for a full panoramic effect. Performance level of Zirkon.

Olivin™

Comfort | The most spacious and ingenious tent in the small peak tent category. For two people or for bushcrafting. Available in three variants – cotton/polyester, lightweight and Combi (lightweight tent with inner tent).

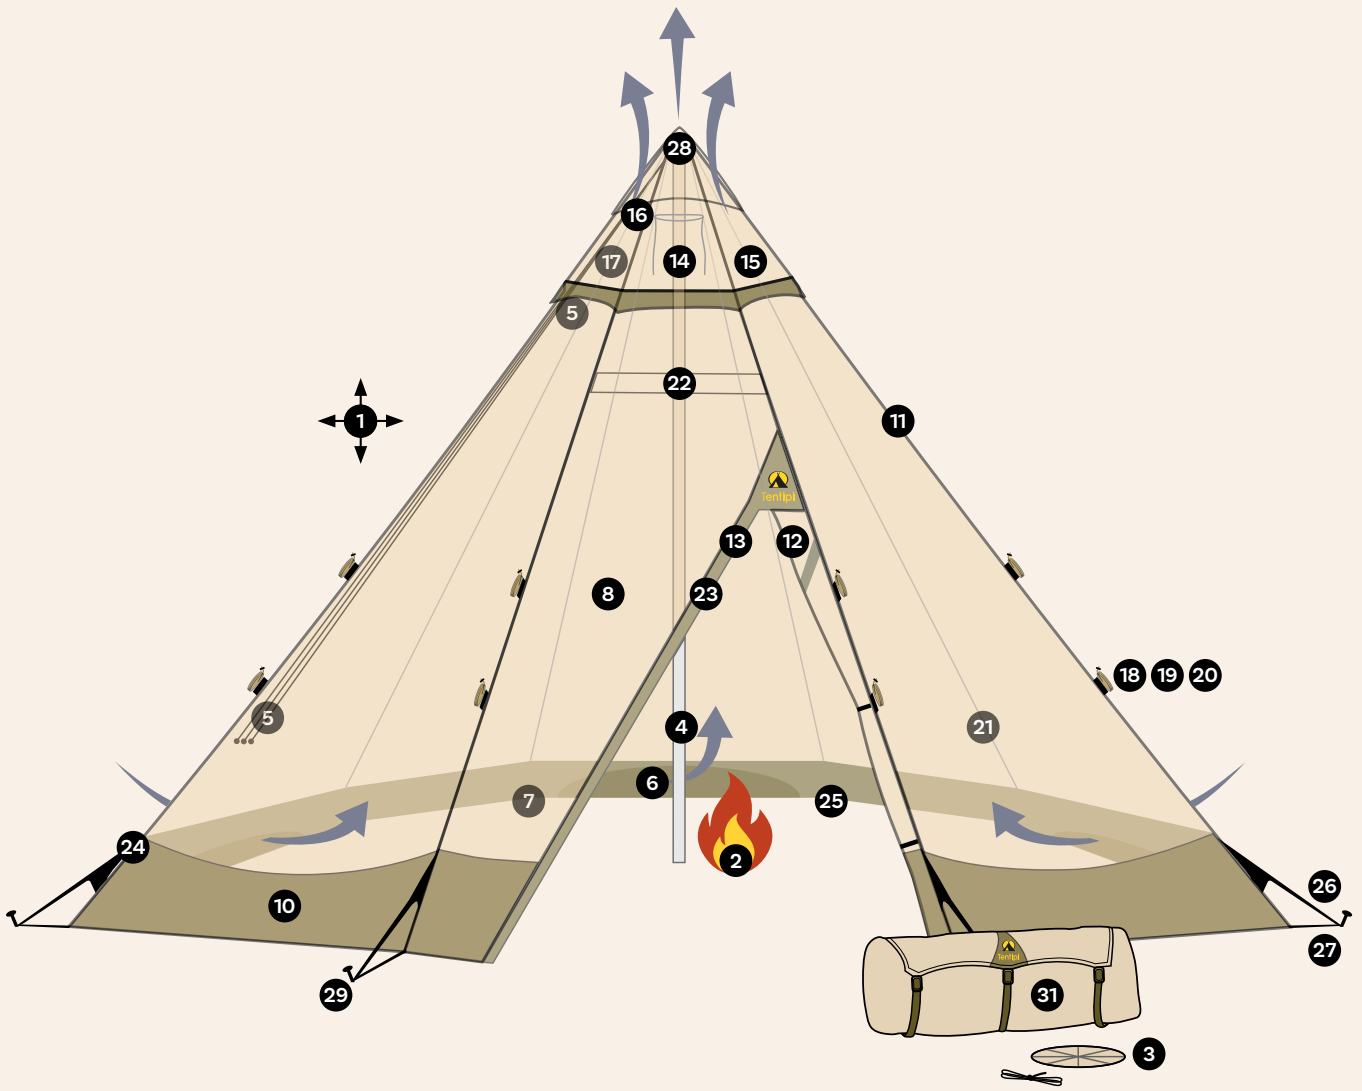

Onyx™

Base | Intended for less ambitious purposes or when low weight is a priority, yet it has been used by mountaineers operating in the Pamir mountains next to the Himalayas.

Defined by details

1. Optimal shape

The symmetrical shape and low centre of gravity makes our Nordic tipis more secure in high and gusty winds than most other tent designs. The cone shape allows for open fire, standing height and space for good times.

2. Capacity of fire

The unique design enables fire-making inside the tent, for warmth, coziness, cooking, and increased safety when camping in cold climate.

3. Pitching tools

Easy method for placing the tent pegs correctly using mounting cross and measuring tape, ensuring the best tension of the fabric and the right shape of the Nordic tipi.

4. Central pole

Our Nordic tipis have only one pole, making them very easy to pitch. The five-piece pole is made from hardened aluminium alloy – high strength, low weight.

5. In-Tent Vent™

Control the tent's indoor climate and ventilation from inside the tent, using patented technology. Simplified ventilation solution for Olivin and Onyx.

6. Air intakes

Adjustable from inside the tent, each fitted with a mosquito net. Not on Olivin or Onyx, but the lower part of Olivin's walls can be rolled up for better ventilation.

7. Inner tent or floor

All our Adventure Nordic tipis can be used with a floor or inner tent. We offer them as accessories so you can combine products according to your needs.

8. Tent fabric

Carefully selected fabric for the best price-performance ratio: cotton/polyester, eco and light.

9. Tent fabric – breathability

Cotton/polyester and eco – good breathing properties ensure a pleasant indoor climate with minimum condensation.

10. Reinforced edging

Reinforcement at the bottom of the tent where most wear occur. (Not on Olivin or Onyx.)

11. Possibility to raise the walls

Available on Safirflex and Zirkonflex models only.

12. Door fitted with mosquito net

Improves ventilation.

13. Diagonal zip with rain flap

Two features that prevent water penetration.

14. Chimney opening

Feature that allows the easy fitting of an Eldfell stove. (Not on Olivin light, Olivin Combi light or Onyx.)

15. Smoke opening

Large smoke opening ensures efficient ventilation on warm days and smoke clearance when using an open fire.

16. Ventilator cap

Large lower cap for ventilation and smoke clearance. Smaller top cap for clearing exhaust gases when the fire dies out. (Simplified ventilator cap on Onyx and Olivin.)

17. Mosquito-net ceiling

Allows ventilation through the ventilator cap without getting mosquitos into the tent. Must be opened up and rolled away when using an open fire or a stove. (Mosquito-net ceiling not available on Onyx.)

18. Storm cords

Storm cords for extra wind resistance. Reflecting threads woven into the cords for visibility.

19. Storm cord fastenings

Facilitate even distribution of strain on the tent walls. Firmly attached thanks to reinforced seams.

20. Storm cord holders

Allow cords to be in place ready for use, without tangling. (Not on Onyx.)

21. Fastenings for accessories

Fully equipped for accessories such as inside pockets, drying rail, detachable floor and inner tent. (Only for floor and inner tent on Olivin.)

22. Accessory sleeve

Built-in feature fitted with Velcro. (Not on Onyx and size 15 tents but they can be supplemented with the accessory connector.)

23. Safety toggles

Allows you to close the door even if the zip has been damaged. (Not on Onyx or Olivin.)

24. Strain-relief for the tent walls

Reinforcements where ground straps attach to the canvas, distributing strain and increasing the durability of the tent.

25. Extra tightening feature

When folding the bottom edge of the tent inwards, use toggles and O-rings for tightening the outer tent and floor. (Not on Olivin or Onyx.)

26. Ground straps

Strong, adjustable ground straps are used instead of cords to anchor and tension the Nordic tipi.

27. Floor tensioners

For a stretched and smooth floor.

28. Cap for central pole

Keeping the canvas fixated to the central pole. Made of super-strong, durable braided bands to support the weight and tension of the entire tent.

29. Tent pegs

Each Nordic tipi comes with an assortment of pegs carefully selected for the tent.

30. Snow or sand pitching

The ground straps are ready for anchoring in snow or sand using accessory Snow and sand pegs or a branch.

31. Compression bag

Unique design which compresses the bag using straps. (Simplified on Olivin and Onyx.)

SAFIR™

Safir 5 light
with Inner tent 5 Pro.

A versatile tent – for passionate outdoor lovers

Safir is used and loved by professionals in the most rough conditions. This is a tent you can rely on in ice-fields and glaciers, in storm-force gales or blazing heat. Safir is our most versatile tent – perfect for extreme expeditions and challenging trekking. Although it's a popular choice for family camping too.

Available in four sizes and in three outstanding materials: cotton/polyester, eco and lightweight.

All Safir tents has three large air intakes, each with a fitted mosquito net. The entrance has a closable mosquito net door. Our patented In-Tent Vent™ system allows you to adjust the ventilator cap, and thereby the temperature inside the tent,

without even leaving your sleeping bag. Enhance the comfort level with a Hekla firebox for open fire or an Eldfell wood burning stove.

The reinforced edging, strain relief on tent walls and hardened aluminum alloy central pole are some of the features that provide the best possible strength in those situations when tents often break.

While relatively light in relation to size, durability is more important for us than lowest possible weight. Safir is for people who want the very best.

Fabrics

SAFIR cp – Cotpolmex Pro

Very strong and well-ventilating cotton/polyester fabric gives an indoor climate far superior to that of a tent made of any kind of coated fabric. The beige-brown colour creates a warm, pleasant atmosphere in the Nordic tipi. The fabric is denser and more resistant to sunlight and retains more strength and colour fastness than all corresponding fabrics tested. It has also better form stability and water repellency properties. With its high-class attributes, attractive appearance and natural feel, this is, as far as we know, the world's best cotton/polyester outer tent fabric. Mildew prevention. Approximately 285 g/m².

SAFIR eco – Environmex Pro

Unique and sustainable fabric with a blend of hemp, organic cotton and recycled polyester. Approximately 285 g/m². Read more about Safir eco on page 16–17.

SAFIR light – Traillix Pro

Very strong, non-ventilating, green, lightweight fabric of high tenacity polyamide. The fabric is waterproof, ripstop reinforced, double-sided silicone-coated and UV-protected. We have allowed this fabric to be slightly heavier in order to make it even stronger. Approximately 80 g/m².

Key features

- Versatile tent for maximum performance and flexibility
- Cotton/polyester fabric with very high fading resistance and very long life
- Three large, rain-protected, mosquito-netted air intakes at bottom edge of tent for optimal ventilation and smoke control
- Enhanced floor fitting with toggle and ring system; safety door-closure toggles in the unlikely event of zip breakage
- Ventilator cap: patented, advanced In-Tent Vent system; double piece with six opening points, controllable from inside the tent; integrated chimney opening; mosquito net in upper part; tighter seal thanks to fibreglass rods
- Mosquito-net ceiling for good ventilation and protection against mosquitos, even without an inner tent
- Storm cords with reflecting threads woven into the cords; pre-tied and fitted with holders
- Reinforced edging for better wear resistance along the bottom edge of the tent
- Many fastenings for attaching accessories and improved tensioning of the inner tent
- Patented, integrated accessory sleeve for a porch or canopy; on Safir 5–9
- General features and details, see pages 4–11

SAFIR™ ECO

Embrace nature in a caring way

Safir eco tents – for people who love and care for nature. Constructed with the same clever design details as the original Safir, but made from a premium ecological fabric blend of hemp, organic cotton and recycled polyester. It is a tent you can rely on in the toughest of climates. Perfect for a multitude of outdoor activities. The off-white canvas creates a fresh light and a pleasant indoor climate.

Tests in harsh conditions demonstrate exclusive features of Safir eco: robust strength, highly UV resistant, excellent stability and high water-repellent properties. The combination of these features produces a well-ventilated and premium indoor climate. Approximately 285 g/m².

Hemp

Hemp is known as one of the strongest natural fibres in the world. It has the same breathable and moisture regulating properties as cotton but requires very little water for growth and during the production process. The plant has natural antibacterial characteristics so there is no need for pesticides or other harsh chemicals. Hemp produces a high harvest per square metre. The hemp plant benefits from a deep root system which binds the soil and leaves it in excellent condition for any succeeding crop.

Recycled polyester

The hemp fabric is reinforced with a recycled polyester, made from renewable plastic bottles. Increased durability with a lower negative impact on the environment.

Organic cotton

100 percent biologically grown using less water than conventional cotton, without the use of toxic chemicals.

Original colour

The use of non-coloured fabric reduces the carbon footprint. No bleaching chemicals, no fabric dye and less water to purify before being discharged into wastewater networks. The fabric is off-white, but the shade can vary as it is the natural colour of the fibres.

You need to be extra careful to keep the off-white fabric clean. Use of fire darkens the fabric in the top. Over the years the tent will get a nice patina.

Safir 7 eco.

ZIRKON™

Family staycation in Sweden
with a Zirkon 15 cp.
© Sara Guldbrandsson

ZIRKON™

Zirkon 7 light with
Inner tent 7 Comfort
and stove Eldfell.

Your living room in your backpack

Explore a new dimension of comfort and possibilities. Zirkon is a home away from home for people who want to invest in their outdoor living. With sophisticated ventilation and advanced features this medium grade tent is a top-tier choice in various settings.

Embrace your next adventure with a lightweight tent that stands out. Zirkon light's eye-catching color is a favourite among Tentipi users. This lightweight tent sits great in any landscape with its earthy tones, easy build process and outstanding wind management. It packs down nicely in a kayak's storage, on the bicycle – or in your backpack, when using the smaller size.

Zirkon also comes in a tan cotton/polyester fabric, offering a superb indoor climate even without inner tent, thanks to the breathing fabric properties.

Enhance the comfort level with a Hekla firebox for open fire or an Eldfell wood burning stove, making this tent a four season champion, even in Arctic conditions.

Equipped with our patented In-Tent Vent™ system, it is easy to ventilate out smoke and adjust the temperature from your sleeping bag. One large air intake with a mosquito net is standard and the door has mosquito protection.

Fabrics

ZIRKON cp – Cotpolmex Comfort

Strong and well-ventilating cotton/polyester fabric which gives an indoor climate far superior to that of a tent made of any kind of coated fabric. The fabric has a natural feel, and its beige-brown colour creates a warm, pleasant atmosphere in the Nordic tipi. Fades rapidly in the sun but without losing strength. Mildew prevention. Approximately 275 g/m².

ZIRKON light – Traillix Comfort

A carefully chosen and very good lightweight fabric. Non-ventilating, rusty red, light, ripstop-reinforced polyamide fabric, UV-protected and double-sided silicone-coated. Approximately 85 g/m².

Key features

- One large, rain-protected, mosquito-netted air intake at bottom edge of tent for improved ventilation and smoke control
- Enhanced floor fitting with toggle and ring arrangement
- Ventilator cap: patented, advanced In-Tent Vent system; double piece with six opening points, controllable from inside the tent; integrated chimney opening; mosquito net in upper part; tighter seal thanks to fibreglass rods
- Mosquito-net ceiling for good ventilation and protection against mosquitos, even without an inner tent
- Storm cords with reflecting threads woven into the cords; pre-tied and fitted with holders
- Reinforced edging for better wear resistance along the bottom edge of the tent
- Many fastenings for attaching accessories and improved tensioning of the inner tent
- Patented, integrated accessory sleeve for a porch or canopy; on Zirkon 5-9
- General features and details, see pages 4-11

Accessories

Separate floor, inner tent with integrated floor, drying rail, stove, porch, canopy, etcetera. See pages 32-40.

SAFIRFLEX™ ZIRKONFLEX™

Safirflex 15 cp with two sections of the walls raised. Fitted with a Half inner tent for storage.

Expanding the idea of a tent

A spacious tent with walls that can be raised partially or all the way around for full panorama effect. Used by nature guides as a communal room and by schools for outdoor education. Perfect for festive gatherings in your garden. Available with the performance level of either Safir cp, Safir eco or Zirkon cp.

With some of the walls raised, you get shelter from the wind, but you still feel close to nature and you can see what is going on outside the tent. When all walls are raised, the covered area offers protection against the sun or rain. Adjustable aluminium poles keep the raised walls up. In strong winds, all walls are lowered and then the tent can withstand just about anything.

Fabrics

SAFIRFLEX cp – Cotpolmex Pro

Very strong and well-ventilating cotton/polyester fabric. For more information, see page 15.

SAFIRFLEX eco – Environmex Pro

Unique and sustainable fabric with a blend of hemp, organic cotton and recycled polyester. Approximately 285 g/m². Read more about Safir eco on page 16–17.

ZIRKONFLEX cp – Cotpolmex Comfort

Strong and well-ventilating cotton/polyester fabric. For more information, see page 21.

Key features

- Expansion panels that enable the tent walls to be raised
- The possibility of creating a 50 square metre covered area
- Zips that hide the expansion panels when they are not being used
- Adjustable aluminium poles that keep the raised walls up
- With all walls lowered, Safirflex is like Safir 15 while Zirkonflex is like Zirkon 15
- Information about Safir, see pages 12–17
- Information about Zirkon, see pages 18–21
- General features and details, see pages 4–11

OLIVIN™

Tentipi

Olivin 2 cp with Rain roof 2 cp and Hekla 7.

OLIVIN™

Camping by one of the many lakes near Sunne in Sweden. Olivin 2 light, Half inner tent, Sand and snow pegs.

Escape everything – except comfort

Olivin 2 is big enough for two people to sleep or four people to sit and socialise and has enough space for storing equipment. Lightweight model at only 1.9 kilograms makes it the perfect hiking tent. The heavier cotton/polyester model is loved by bushcrafters because of the possibility of having a fire inside the tent and the earthy look of the fabric.

Our In-Tent Vent™ ventilation system together with the tent's tall shape provide natural ventilation on hot days. The lower part of the walls can be rolled up and fastened for optimal ventilation (one option for cp, five for light). The shape of the tent makes it very storm-resistant.

Olivin 2 cp

For those who want a small tent in a breathable material, we offer Olivin 2 cp made of a cotton/polyester blend. A small stove can be used inside the tent and a special ventilator cap with a chimney opening is included.

Olivin 2 light

Olivin 2 light is a handy home for hikers hikers, because of both space and weight. In an emergency, a small open fire can be lit inside the tent.

Olivin 2 Combi light

This model is delivered with a detachable inner tent with mosquito-netted ventilation openings. The outer and inner tents are pitched at the same time. Robust floor material stops ground damp, a common problem in lightweight tents. A fire cannot be used with the inner tent installed.

Accessory – Inner tent and Half inner tent

An inner tent is included with Olivin 2 Combi light and can be bought as an accessory for Olivin 2 cp and Olivin 2 light. A half inner tent is also available as an accessory. With an inner tent, you have more reliable protection against insects. The sturdy floor withstands ground dampness and therefore condensation is reduced too. An inner tent can also be used separately, for example, when insect protection is the main priority.

Accessory – Floor

The floor is designed to make it possible to remove or fold away the part nearest the door to avoid having dirty shoes or crumbs on the tent floor or if you need to make a small fire. It fits both Olivin cp and light and is made of a carefully chosen material that withstands ground dampness.

Accessory – Rain roof

The rain roof provides rain protection and shade in front of the entrance. It is attached to Olivin's accessory sleeve.

Fabrics

OLIVIN cp – Cotpolmex Comfort

Strong and well-ventilating cotton/polyester fabric which gives an indoor climate far superior to that of a tent made of any kind of coated fabric. The fabric has a natural feel, and its beige-brown colour creates a warm, pleasant atmosphere in the Nordic tipi. Fades rapidly in the sun but without losing strength. Mildew prevention. Approximately 275 g/m².

OLIVIN light | OLIVIN COMBI light – Traillix Comfort II

A carefully chosen and very good lightweight fabric. Rusty red, non-ventilating, light, ripstop-reinforced polyamide fabric, UV-protected and double-sided silicone-coated. Approximately 50 g/m².

Key features

- Small but spacious and strong; for those who want a light load and appreciate the comfort of ample space
- Built-in snowflap that can be rolled up which makes the tent suitable for use in any season
- Ventilator cap: simplified In-Tent Vent system with three opening points, controllable from inside the tent
- Mosquito-net ceiling for good ventilation and protection against mosquitos
- Storm cords with reflecting threads woven into the cords; pre-tied and fitted with holders
- Patented, integrated accessory sleeve for a better-fitting rain roof
- General features and details, see pages 4-11

ONYX™

ONYX™

Onyx 5 light, Wildspitze in Austria
© Mike Fuchs

For regular hiking or at 5,300 metres

Although Onyx is intended for less ambitious purposes, it was still the choice for Mike Fuchs when climbing Wildspitze in Austria and for base camp at Lenin Peak, Pamir, 5,300 metres.

By taking away or simplifying certain features we managed to reduce weight and price on Onyx. Easy to use, generous with space and offering good times around a cosy fire – this Nordic tipi is basic, yet more than just a tent.

Onyx is easily ventilated through the door fitted with mosquito net and has a simplified In-Tent Vent ventilation control,

allowing you to adjust two opening points of the ventilator cap from inside the tent.

Roll up the door and fasten with toggles for a snug look. Onyx is compatible with inner tents and floors.

For warmth and cooking, use Hekla fire box for open fire or Eldfell stove. The chimney of Eldfell can be fitted through the smoke opening.

Fabrics

ONYX cp – Cotpolmex Comfort

Strong and well-ventilating cotton/polyester fabric which gives an indoor climate far superior to that of a tent made of any kind of coated fabric. The fabric has a natural feel, and its beige-brown colour creates a warm, pleasant atmosphere in the Nordic tipi. Fades rapidly in the sun but without losing strength. Mildew prevention. Approximately 275 g/m².

ONYX light – Traillix Base

A carefully chosen fabric. Non-ventilating, grey, lightweight polyamide fabric, ripstop reinforced and PU-coated on one side. Approximately 80 g/m².

Key features

- Lower weight and price compared to our other tents thanks to fewer or simplified features
- Large smoke opening; ensures efficient ventilation on warm days and smoke clearance when using a fire
- Door fitted with mosquito net. Improves ventilation.
- Ventilator cap: simplified In-Tent Vent system with two opening points, controllable from inside the tent
- Storm cords with reflecting threads woven into the cords, supplied loose
- Porch or canopy (accessories) can be attached with a separate accessory connector
- General features and details, see pages 4-11

Ventilator cap, door with net, central pole, storm cords, measuring tape, packing bag and standard tent pegs.

Accessories

Separate floor, inner tent with integrated floor, drying rail, stove, porch, canopy, etcetera. See pages 32-40.

Stove and fire equipment

Get rid of damp and cold, create a warm and cosy atmosphere, dry clothes and cook food. Tentipi Adventure tents are designed to use with an open fire or stove, making them a home from home in all weather. Be sure you are fully competent to deal with the risks involved before striking that match. Follow our instructions and fire safety advice.

Zirkonflex with Half inner tent 15, Hekla 30 fire box, Hekla fire box stand and Hekla 30 BBQ grate.

Hekla 30.

Safir 9 cp with Floor 9 Pro and Eldfell.

Eldfell stove

With its ingenious design, efficient heat transmission, low weight and easy handling, Eldfell is the heart of the Nordic tipi and a faithful friend in cold and damp conditions.

Eldfell is designed to make combustion take place nearer the ground, creating more heat inside the Nordic tipi,

providing more effective heat for cooking and reducing wood consumption. Eldfell fits all Adventure tents from size 5 and larger, using the same stove body but different chimney lengths. The stove is made of stainless steel and comes in its own purpose-made wooden box. All technical features have been designed to fulfil demands for low weight, good

functioning and strength. The combustion chamber is spacious and about 50 centimetres long to take long, thick logs. The extendable insulation pipe protects the tent fabric even in strong winds. The spark arrester protects both the tent and the surrounding area. To prevent sinking when used in snow, the stove legs are notched for support poles.

Hekla fire box

The Hekla fire box gives off little smoke but a lot of heat, which means it is easy to cook food on it or enjoy the heat and light from the open fire. It takes up very little space when packed. The fire box is indispensable if you are going to build a fire on snow. The metal rails under the box can be placed on branches or other support material on the snow to preventing the fire box from sinking into the snow.

Hekla 7

An alternative to a spirit stove set when hiking. Throws off a comfortable heat which, for our smaller Nordic tipis, is sufficient if the temperature is a few degrees below zero. Packed flat – small and compact.

Hekla 30

Large enough for making big fires. Good for Nordic tipi size 7 and larger. Packed flat – small and compact.

Hekla fire box stand

Lawns, sensitive forestland or stone slabs are effectively protected from scorching, while on snow, the stand prevents the fire box from sinking because of the heat. It also prevents Hekla 30 from tipping over when the grate (accessory) is used as a protruding shelf for keeping food warm. The stand can also be used with Hekla 7. Any size of Hekla and a grate for Hekla 30 fit inside the stand after it has been folded down to a compact unit.

Tent accessories

Tentipi original accessories have been designed with the utmost care for optimal functionality with the Nordic tipis. We continually strive to develop the most requested accessories and also adapt them to earlier models of tents.

Half inner tent 9 divides Safir 9 cp into an area for socialising and a space for storage.

Safir 9 cp with Canopy 7/9 cp.

Zirkon 7 light with Inner tent 7 Comfort and Eldfell 7.

Floors

Tentipi whole floors are available in two grades – Pro and Comfort. Either grade of floor can be used with any of our tent models except Olivin. The zips make it possible to open the floor in different ways. A tensioning device fitted to the outer tent improves the seal between the floor and the tent walls, helping to keep insects out.

Floor Pro

Floor Pro is made of light, strong, high tenacity polyamide fabric which is much stronger than standard fabrics. The floor has four zips which allow flexible opening possibilities.

Floor Comfort

This floor is made of a carefully chosen material and has the same construction as Floor Pro except that U-opening is not possible.

Half floors

Tentipi half floors are available in Comfort grade. If the Nordic tipi is used with a half inner tent, you can have a half floor on the rest of the living area. With no inner tent, a whole floor can be made by using Velcro to join two halves of ordinary material or half ordinary/half fleece. To make a fire in the tent, you can fold away the floor by opening the zip in the middle. The zip also makes it possible to remove a quarter of the floor area to create an uncovered space for dirty shoes, firewood and so on.

Half floor Comfort

Half floor Comfort is made of a carefully chosen material. The zip makes it possible to open up the floor to make a fire or to use a quarter floor.

Half fleece floor Comfort

This floor is made of a carefully chosen material where one side is covered with soft and comfortable fleece. It is fully damp-resistant, like all our other floors.

Key features

- No need to detach when packing the tent; automatically in the correct position when the tent is pitched
- Fitted with a zip cover which protects the zip from dirt
- Flat and smartly stretched with the help of a tensioning device fitted to the outer tent

O-opening: Open from the centre and outwards. This allows you to brush off breadcrumbs on the ground rather than on the floor. Also enables use of stove or open fire.

A-opening: Open from the centre and outwards but without opening the zip by the door. Allows crumbs to be brushed onto the ground while making more dry storage space by the door. Use O + A-opening for secure use of an open fire or stove.

V-opening: Open from the door. To avoid having dirty boots on the tent floor.

U-opening: A large opening from the door and round the central pole. For wood storage, open fire or to have ground contact. (Only Floor Pro).

Inner tents

Tentipi inner tents, half inner tent and mesh inner tents are available in different grades. The whole inner tents can be used with any of our size 5, 7 and 9 tent models. Our half inner tent fits sizes 7, 9 and 15. Our Nordic tipis have been designed to function well even without an inner tent, although an inner tent does provide several advantages.

As for the ventilation, on warm, sunny days when the mosquitos are in action, there is a closable insect net over the smoke opening that fits tight around the central pole.

Closable insect net.

The number of mosquito-netted air intakes in the different types of inner tents varies. Inner tent Base has no air intakes other than the mosquito-netted door which is a standard feature on all inner tent models.

Inner tent Pro

The walls are made of light, strong, high tenacity Teflon impregnated ripstop fabric which is much stronger than the material used in standard fabrics. Vertical zip, three air intakes and a sewn-in Floor Pro with O-opening and V-opening for using stove or open fire.

Inner tent Comfort

The walls are made of a carefully chosen material. Vertical zip, three air intakes and a sewn-in Floor Comfort with O-opening and V-opening for using stove or open fire.

Inner tent Base

The walls are made of a carefully chosen material. Curved zip, no air intakes other than the door and a sewn-in floor without any zips. It is not possible to have a stove or an open fire inside Inner tent Base.

Half inner tent Comfort

A half inner tent can be used to provide privacy inside the tent. For extra comfort inside the rest of the tent, it can be combined with a half floor or a half fleece floor. The walls are made of a carefully chosen material. Curved zip, two air intakes and a sewn-in floor of Comfort grade quality but without any zips. It is not possible to have a stove or an open fire in or with Half inner tent Comfort.

Mesh inner tents Base

Our mesh inner tents give optimal insect protection and are also more airy than our ordinary inner tents. They are especially good together with a Nordic tipi of cotton/polyester where condensation is ventilated out through the tent fabric. The walls are made of mesh. Curved zip, three openings for the whole and two for the half mesh inner tent and a sewn-in floor of Base

grade quality, without any zips. It is not possible to have a stove or an open fire inside Mesh inner tents.

IT Solo pitching kit

The kit is used for pitching any of our inner tents on their own, that is, without a Nordic tipi. Practical in warm conditions but not rainproof or storm-resistant.

Inner tent key features

- More reliable protection against insects
- Less condensation caused by ground dampness because the floor covers the whole or part of the ground area of the tent
- More even distribution of heat – from a stove, for instance – when retained by double tent walls (does not apply for the half or the mesh inner tents)
- Protection against condensation, which is especially important for Nordic tipis made of lightweight material (does not apply for the mesh inner tents)
- No need to detach when packing the tent; easily removed from the quick fastenings

Porch and canopies

Make more space by adding a rain- and sun-protected entrance. A porch or a canopy creates space for shoes and other items and enables dry entry into the tent.

Porches and canopies are easily attached and removed thanks to the tent's Velcro-fitted accessory sleeve. Canopies can also be used as a freestanding roof or as a shelter.

Onyx and size 15 Nordic tipis, as well as Safir and Zirkon models before 2012, need an accessory connector to attach a porch or canopy.

Porch key features

- Any rainwater running from the top of the tent is led away from the entrance
- Can be opened completely to create a 180-degree view
- Easily removed without taking down the tent, for example, if there is a risk of snow or bad weather

Canopy key features

- Can be used separately and in different ways
- Depending on the size of the canopy, either one or three telescopic poles are included
- Rain-protected entrance creates more space
- Easily removed without taking down the tent, for example, if there is a risk of snow or bad weather

Rucksack frame

Our rucksack frame has been developed primarily for Safirflex/Zirkonflex but fits Safir 15/Zirkon 15 too. It is also perfect for any heavy loads, such as firewood. The frame is made of aluminium. It has an adjustable load-bearing system which distributes the weight. The padded hip belt gives good support and reduces

strain together with comfortable, padded shoulder straps. Because the rucksack frame can be adjusted in so many ways, it can be adapted to any build of body. It has many features such as the quick-lock buckles, the top straps, the chest strap and the ventilating back mesh panel.

Key features

- Makes it easier to carry the larger Nordic tipis
- Makes it easy to attach additional items/pack bags
- Creates a ventilating air space between the back and the load
- Useful for fetching firewood

Rucksack frame

Weight (kg)	2.4

Rain hat

The rain hat fits all sizes and models of tents except Olivin. It allows full ventilation on warm, rainy summer days while keeping rain out. It is placed over the tent top and attached to the storm cord fastenings.

Key features

- Allows full ventilation even when it rains
- Fitted easily over the top of the tent
- Retains its taut shape with the help of a collapsible metal ring

Rain hat

Article number	12704

Pegs and stakes

We have our own range of Tentipi pegs and stakes. They are designed so the ground strap can be hooked onto the peg, after it has been pushed into the ground – great for pitching in a hurry. Our lightweight Nordic tipis are supplied with lightweight pegs. The cotton/polyester and eco Nordic tipis are supplied with our specially designed hard ground stakes as their main stakes.

Lightweight pegs - Y-pegs and hook peg

The pegs which are a standard part of our lightweight tents combine low weight with maximum strength. We combine three types of pegs (except for Olivin which has only one type) to optimise weight and

function. These are manufactured specially for Tentipi with three quality grades. The level of performance and quality of our pegs in the Pro and Comfort grades are high, through the choice of materials and manufacturing techniques which include hardening. Our Base pegs are comparable to good quality pegs on the market.

Pro – standard pegs of Safir light.
 Comfort – standard pegs of Zirkon light, Olivin cp and Olivin light.
 Base – standard pegs of Onyx light.

Thanks to our unique design, Tentipi Y-pegs have about 25 percent more flexural strength than other Y-pegs of the same material and weight.

Hard ground stakes – steel stakes

Our hard ground stakes are made of hardenable steel, that make them rigid and strong. Each stake is forged from a single steel rod and has an unhardened stake body to retain toughness and a hardened tip. Grooves, which are machined along the stake body, further increase holding power.

Snow and sand peg

Use Tentipi's custom pegs if you are camping on sandy or snowy ground. The length and width of the snow and sand peg creates much better anchoring to the ground. The peg is made of aluminium and is super light in relation to size.

Wooden pole set

Instead of a central pole in our Adventure Nordic tipis, it's possible to use a wooden pole frame, with cross-poles just like in our Event tents. This is of great importance for those who run winter camps.

Without the central pole, the interior will be more open. This makes it easier to furnish the Nordic tipi in different ways. The tent can cope better with the weight of snow – it is already storm-resistant – and can be left unattended more easily. The debarked wooden poles add ambience and an authentic feel. The pole set is recommended for use only in winter and is available in sizes 7, 9 and 15.

Crafted with passion since 1989

© Felix Groteloh

Tentipi culture

The success and joy of the company is the result of making things a bit better together. We always strive for the right quality and deliver what's promised. Authenticity is in everything we do.

Tent production in fully-owned factories

Moskosel a small village in Lapland in northern Sweden. This is the place where it all started 1989.

Sunne in central Sweden. Also the main office.

Qingdao in China, fully owned factory where the staff have the same working conditions as in Sweden.

The best thing we can do for our planet is make long-lasting products

At Tentipi, we share a common sentiment with many of our customers - we don't enjoy constantly buying new things.

That's why we focus on creating durable products built to last year after year. We design our tents so strain is evenly distributed on the canvas, we enforce where most wear occur and use high-quality materials that has been thoroughly tested.

To reduce waste we spend a lot of time calculating the most efficient way to cut canvases. The in-between left-overs are used for attachment points, pockets and so on. Odd pieces we make into hammocks and storage bags.

We believe in repairable products. We offer repair kits for small damages and we have professional repair centres for the bigger jobs. Our tents are stitched in sections so that a damaged part can be exchanged with a new, rather than throwing away the whole tent when patching is no longer an option.

Highest altitude: 5,300 meters, Lenin Peak, Pamir | Onyx 5 light

Lowest temperature: -38°C Svalbard, Norway | Safir 5 cp

22 days above the Arctic circle

The two snowmobiles had set off back south early in the morning. Within 300 kilometers there was no civilisation whatsoever. We packed our expedition sleds, carefully stowing away each item in the order that we would need it: tent, tea, cameras and so on.

Me and my friend Eric were on an extensive skiing expedition through Svalbard. This Norwegian island in the arctics is known for its vast glaciers, harsh winters and ... polar bears.

It takes 45 minutes to put up a polar bear fence. The tent only takes about five minutes, even in a storm or on hard ground. It meant we had more time to recharge for next day.

I have tested geodesic tents, tunnel tents, big tents, light tents, small tents, but never been satisfied. Until I tried Safir 5 cp from Tentipi. It's quick to erect and take down, outstanding in high wind speeds, and large enough to comfortably spend three days in, with all the gear, if you must wait for better weather.

It's heavier than a regular tunnel or dome tent. But it is a compromise between having a good night's sleep or having a night where you wake up every two hours to check the tent is still intact. I would say that it's a good investment to have the extra weight on the tent that make you well rested for the next day.

We had rough snowstorms. Previously I would have stayed awake all night from the noise or from being afraid the tent canvas would tear. After our first stormy night in the Safir 5 I knew I could relax and slept great ever after.

Our routine for the next three weeks: we got up at seven, made tea and muesli, discussed the day's route and packed up camp. Every morning, we were on the move just after nine o'clock.

After 22 days and a total of 500 kilometres we arrived at our goal – Longyearbyen.

”

It's a good investment to have the extra weight on the tent that make you well rested for the next day.

Mike Fuchs

We create space for good times

ADVENTURE – meet nature

Home from home camping tents with ample space for socialising around a fire, plenty of headroom and outstanding ventilation.

EVENT – enjoy the moment

Unique, spacious and flexible giant tents which create an exciting setting and a great ambience for inspiring events.

GLAMPING – expect magic

High-end, elegant tents for glamorous camping with an airy and authentic atmosphere. Made of wooden poles and durable canvas.

TENTIPI CIRCULAR – cherish the planet

Tentipi Circular is part of Tentipi's efforts to protect the environment. Our plan is to turn left-over manufacturing materials into new products.
